RE: Palliser Airshed Society (PAS) Ambient Air Monitoring Report – June 2005

Enclosed is the PAS Ambient Monitoring Report for the month of **June 2005**.

Please note that this report has been prepared in partial fulfillment of the City of Medicine Hat's air monitoring requirement as well as all members of the Palliser Airshed Society.

Continuous Monitoring – Crescent Heights

Included in this report are; monthly sampling table, detailed hourly average reports and multipoint calibration reports of all instruments. The measured ambient air quality was within the Provincial and Federal guidelines with no exceedences recorded. Operational time of all instruments was above 90% uptime for the month of June except for THC and Wind Speed / Wind Direction. Due to hail damage and power failures the THC and WS/WD were less than 90% operational during the month of June (AENV Ref# 161424). There were no significant events leading to emergency response for the month of June.

The following is a summary of the monthly averages recorded during sampling:

- Monthly average concentrations of NO₂ was 5.1 ppb
- Monthly average concentrations for O₃ was 28.9 ppb
- Monthly average concentrations for CO was 0.2 ppm
- Monthly average concentrations for PM_{2.5} was 2.0 µg/m³

Passive Monitoring – Six Stations throughout the PAS zone:

The following are the ranges for June 2005 recorded by the six passive stations located throughout the PAS zone. There was one SO₂ passive located at site 5 (Suthridge) that was damaged and not reported for this month.

- Monthly average concentrations for SO₂ passives ranged from 0.2 ppb to 0.3 ppb
- Monthly average concentrations for NO₂ passives ranged from 2.7 ppb to 4.9 ppb
- Monthly average concentrations for O₃ passives ranged from 24.3 ppb to 35.5 ppb

RE: PAS Air Monitoring Directive Contravention Report Ref # 161424

A contravention of the Alberta Air Monitoring Directive was recently reported by Focus to Alberta Environment (AENV) on behalf of the Palliser Airshed Society (PAS). The contravention was less than ninety (90%) percent data collection for the month of June for the Total Hydrocarbon Analyzer (THC) and Wind Speed / Direction meteorological instrumentation at the Crescent Heights Air Monitoring Station located in Medicine Hat, Alberta. The station is owned by PAS and operated on their behalf by Focus. The contravention has been assigned AENV reference number 161424.

The cause of the contravention was data removed after the QA/QC processes which identified problems from a storm front (hail storm) which caused damage to the wind instrumentation and the station to shut-down. For the wind instrumentation, hail from a storm blew off a cup from the anemometer resulting in invalid data from the wind system from the period of the storm (June 17) to the replacement of the wind head (June 27). Data was being collected over the entire period; however after the storm hit on June 17th, it was noted that wind was erratic and THC was recording negative values (-2.23 ppm). This prompted a station inspection where it was noted that a cup was missing off the anemometer, and the ordering of a new wind system on June 20. In addition to the storm causing damage to the wind system, a power surge caused the THC pump to fail, it was manually restarted on June 20th, however more than 10% of the monthly data had been lost.

As these issues were a result of a storm front there were no direct actions that could be taken to prevent this from happening in the future.

If you have any questions, please feel free to contact me at the Focus office.

Sincerely,
THE FOCUS CORPORATION

Crescent Heights Station

General Station Issues

Station lost power from June 10 (14:00) to June 12 (0:00) due to a power outage. In addition, a second storm event caused damage to the meteorological equipment and a subsequent power outage caused the THC pump to fail on startup.
